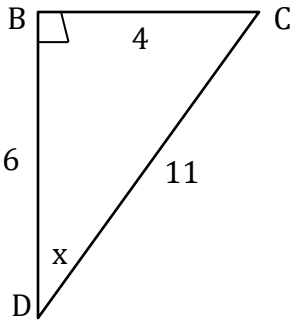
Trigonometry

Name:_____ Date:_____

1)

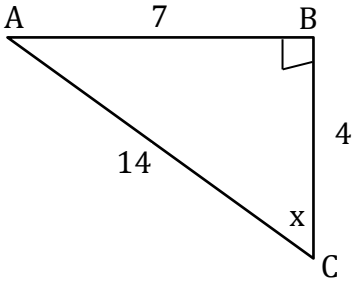


The length opposite to x is _____

The length adjacent to x is _____

The length of the hypotenuse is _____

2)

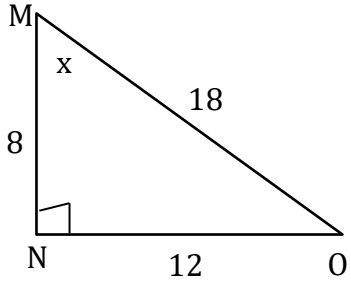


The length opposite to x is _____

The length adjacent to x is _____

The length of the hypotenuse is _____

3)

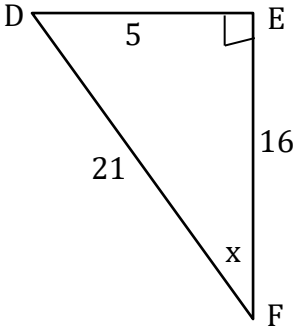


The length opposite to x is _____

The length adjacent to x is _____

The length of the hypotenuse is _____

4)

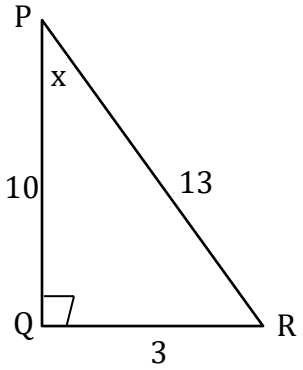


The length opposite to x is _____

The length adjacent to x is _____

The length of the hypotenuse is _____

5)

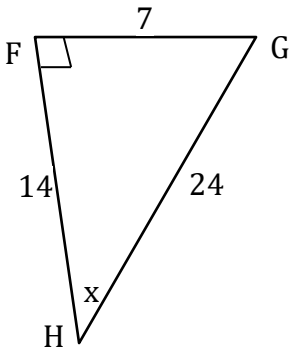


The length opposite to x is _____

The length adjacent to x is _____

The length of the hypotenuse is _____

6)



The length opposite to x is _____

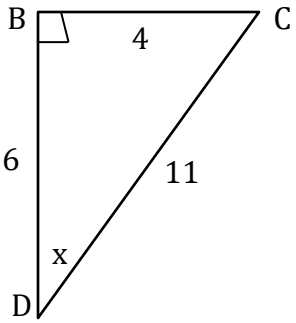
The length adjacent to x is _____

The length of the hypotenuse is _____

Trigonometry

Name:_____ Date:_____

1)

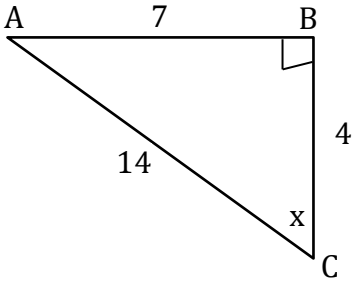


The length opposite to x is 4

The length adjacent to x is 6

The length of the hypotenuse is 11

2)

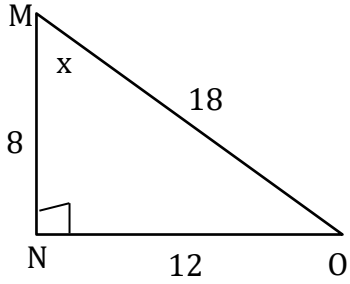


The length opposite to x is 7

The length adjacent to x is 4

The length of the hypotenuse is 14

3)

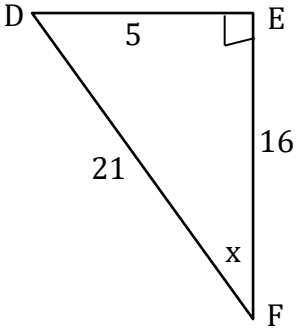


The length opposite to x is 12

The length adjacent to x is 8

The length of the hypotenuse is 18

4)

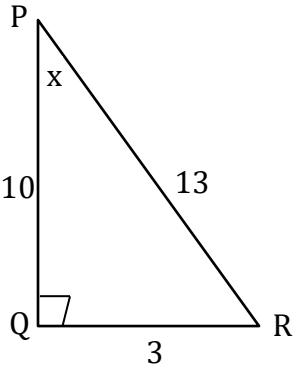


The length opposite to x is 5

The length adjacent to x is 16

The length of the hypotenuse is 21

5)

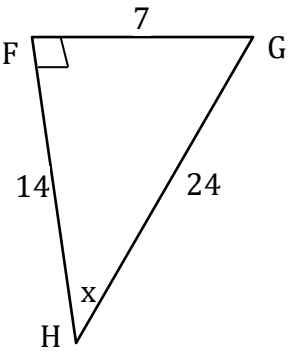


The length opposite to x is 3

The length adjacent to x is 10

The length of the hypotenuse is 13

6)



The length opposite to x is 7

The length adjacent to x is 14

The length of the hypotenuse is 24
